

Understanding trauma and brain development

STAFF SELF-ASSESSMENT TOOL

for staff working indirectly or infrequently with children, young people and families (tier 2)

In 2017, the Loddon Children & Youth Area Partnership identified four 'pillars of competency' that are essential in supporting vulnerable children, young people and families.

The purpose of this tool is to:

- · assist staff working indirectly or infrequently with children, young people and/or their families (for around 30-60% of the time) to assess levels of competence in the four pillars
- facilitate discussions between staff and managers about professional development and training needs in relation to the competencies
- provide the basis for self-reflection and planning
- provide a baseline for tracking progress in building competency over time

Understanding trauma and brain development	

This competency includes training related to brain science, and the effect of trauma on brain development and behaviour. A common example is 'trauma informed care' training. This competency means knowing how to deliver effective care to people with trauma histories, create a safe environment and prevent secondary traumatic stress in staff.

Che	ck the appr	opriate box:					
	I have cor	completed training in this competency and know how to apply it in my work					
	I have completed training in this competency but need to update my learning						
	I have not completed training in this competency						
	Yes	No I have a good understanding of the organisation's rationale for building this competency					

For each statement below check the appropriate box:	Often	Sometimes	Rarely/ Not at all	Not Applicable
I have accessed the online information about this competency (e.g. resources, Fact Sheets)				
I know where to refer clients or colleagues for assistance when this is needed				
I can recognise and address the symptoms of vicarious trauma in myself and other workers
